

Benefits

- ➔ Traffic Logging
- ➔ Regulatory compliance
- ➔ 80,128 bits encryption
- ➔ Central Management
- ➔ Simplified Deployment across enterprise

Why use workstation logging-software?

Reports claim that popular social networking sites are costing UK businesses £123 million each day in lost productivity. A major study into how British workers use the internet found that at least 233 million hours of working time is spent on such sites each month.

CedeTracker helps employers maintain high levels of productivity by tracking computer use. CedeTracker captures frequent screen shots of desktop activity and stores them in encrypted, searchable logs. Employees receive warnings that computer activity is being constantly monitored while employers are able to search logs for evidence of computer misuse. Logs can be stored centrally or on individual computers.

Introducing: CedeTracker

Workstation activity and content auditing.

Why CedeTracker?

CedeTracker™ accommodates OS platforms in the MS environments, UNIX and Linux based networks or infrastructures, is placed on individual PCs and notes, logs and encrypts traffic. Every screen usage is captured in 3 minute intervals in 8 bits, stored in an encrypted file on the users PC, or on a central server.

Simplified Auditing

Viewing of the log files is only possible via a viewing tool deployed to IT or HR or the owner of the computer. The images are time/date stamped and searchable. The logs include all keyboard input and all window titles.

Easy To Deploy Across Organisations

Whilst similar products may be expensive and time consuming to install and deploy, CedeTracker is competitively priced, installs in seconds requiring little disk space or memory and has little impact on work environments or on performance.

CedeTracker can be easily deployed across an entire enterprise using existing deployment mechanisms such as Group Policy, Microsoft SMS or third-party products

CedeTracker:

- Not memory or hard drive/server space intensive
- Secure logging of Desktop Activity on selected workstations
- Facilitates remote access to Desktop Activity log
- Creates logs that are date stamped for easy searching
- Easy to deploy the 'Logging Agent' from centralised IT
- Low processor power
- Built to significantly compress screen shots

Powered by CedeCrypt – effective security made simple.
